Introduction to the assighment

Alexander and I have chosen to make the "To Do List"
project because we thought that it would be very useful
for the student's life everyday routine.
Since we had to have the "Add item" and "Done" section,
we did it by implementing the checkpoint (ul li.checked
) in the done list and cross line in order for the user to
understand that his to do list point were "accomplished".
We also added a clittle cross in order for the user to get
rid off the task that he doesnt need anymore. There is
also a typing window where you can add more task that
you want to accomplish in your "To Do List".
